

# Ultra Violet Purifier

Built in the UK and incorporating efficient linear U.V. technology, these units offer robust construction and reliability with close contact U.V. penetration for rapid algae destruction with the added benefit of reducing harmful pond bacteria levels.

Unlike other units on the market which require multiple bulbs in the larger models, Lotus ultra violet purifiers are all fitted with a single bulb, even the mighty 30, 55, 75 and 100 watts units.

This is an important cost consideration when replacing bulbs!!

- Economical bulb replacement
- Low running costs
- Proven electronic technology
- Low maintenance
- Sturdy weatherproof case

ULTRA VIOLET MODEL	POWER	LOW FISH STOCK		HIGH FISH STOCKS	
	WATTS	LITRES	GALLONS	LITRES	GALLO
